# Team Awesome

## Team 1234A

### Engineering Notebook

Notebook Number: 1

**Date:** September 1, 2023 – April 30, 2024

**Organization:** Awesome High School Robotics

### Team Members:

Alice Smith, Bob Jones, Charlie Brown

# Design Process Phases & Formatting Guide

This notebook is color-coded by the phase of the engineering design process. The table of contents and the header of each entry will reflect these phases.

**Define Problem:** Identifying the core issue, setting SMART goals, outlining constraints and deliverables.

**Generate Concepts:** Brainstorming, research, prototyping, and decision matrices to evaluate potential solutions.

**Develop Solution:** Creating CAD, detailed sketches, math calculations, graphical models, and pseudocode.

**Construct and Test:** Building the robot, writing the code, executing test plans, and gathering qualitative/quantitative data.

**Evaluate Solution:** Reflecting on constraints, event outcomes, and planning future improvements.

## General Formatting

- Keep entries in chronological order.
- Ensure all figures have captions and the initials of the author.
- Provide detailed explanations for calculations, code logic, and design choices.

# Contents

**Define Problem – Project 1 (2026-04-29)** . . . . . **1**

# Project 1

**Project Title:** Project 1 **Date:** 2026-04-29
**Author:** Andrew Needham **Phase:** Define Problem

Header

**Snippet:**

```
#include <iostream>  // Preprocessor directive for input/output

int main() {
    // std::cout is used to print text to the console
    std::cout << "Hello World!" << std::endl;
    return 0; // Indicates the program finished successfully
}
```

- fsdfds
- dsfds

1. dsfsd
2. sdf
3. sfd

Figure 1: (Initials: Andrew Needham)

Table 1:

| Trial | Points |
|---|---|
| 1 | 100 |
| 2 | 90 |
| 3 | 110 |
| 4 | 80 |
| 5 | 120 |

Cool
Blah blah blah
