Engineering Notebook

Notebook Number: 1

Date: September 1, 2023 – April 30, 2024

Organization: Awesome High School Robotics

Team Members:

Alice Smith, Bob Jones, Charlie Brown

Design Process Phases & Formatting Guide

This notebook is color-coded by the phase of the engineering design process. The table of contents and the header of each entry will reflect these phases.

Define Problem: Identifying the core issue, setting SMART goals, outlining constraints and deliverables.

Generate Concepts: Brainstorming, research, prototyping, and decision matrices to evaluate potential solutions.

Develop Solution: Creating CAD, detailed sketches, math calculations, graphical models, and pseudocode.

Construct and Test: Building the robot, writing the code, executing test plans, and gathering qualitative/quantitative data.

Evaluate Solution: Reflecting on constraints, event outcomes, and planning future improvements.

General Formatting

- Keep entries in chronological order.
- Ensure all figures have captions and the initials of the author.
- Provide detailed explanations for calculations, code logic, and design choices.

Contents

Define Problem – Project 1 (2026-04-29) **1**

Project 1

Project Title: Project 1 **Date:** 2026-04-29
Author: Andrew Needham **Phase:** Define Problem

Italic

Bold Italic

- Unordered

1. Ordered
2. Ordered 2

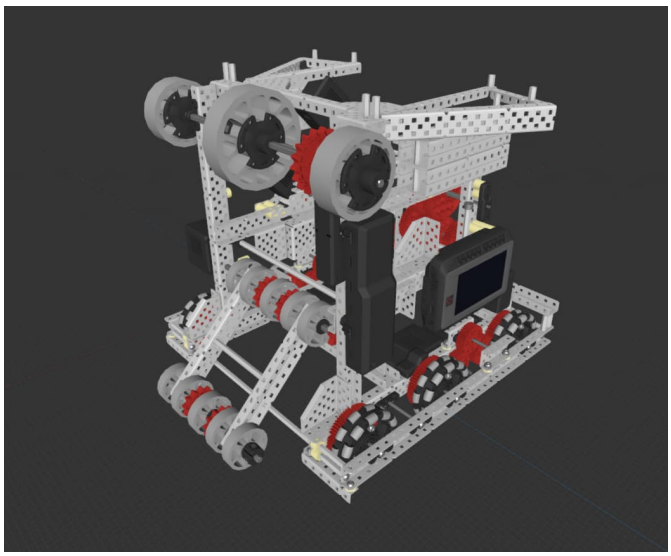

Figure 1: (Initials:)

Snippet:

```
#include <iostream>  // Preprocessor directive for input/output

int main() {
    // std::cout is used to print text to the console
```

```
    std::cout << "Hello World!" << std::endl;
    return 0; // Indicates the program finished successfully
}
```

Hello

Test data

Table 1:

Trial	Points
1	100
2	90
3	110
4	80
5	120
